About Us

A Saudi group operating across the healthcare sector through four integrated areas: developing intelligent medical technology, operating health facilities and managing their revenue cycle, bridging facilities to digital-transformation requirements, and medical devices and brands.

We work with the facility on its own ground and with its existing systems — raising its efficiency, not replacing it.

EHYA HEALTH

VALUES

Our Values

Impact before scale

We measure ourselves by what changed inside the facility, not by contract count

Clarity, not promises

What is said in the proposal is what is delivered in operation

Build, do not replace

We work above the facility's existing systems, not against them

Data sovereignty

Saudi healthcare data stays inside the Kingdom

MISSION & VISION

Mission & Vision

Mission

To raise the operational and financial efficiency of Saudi health facilities, with tools built inside the Kingdom for its reality rather than imported into it.

Vision

To be the bridge the medical facility crosses into digital transformation — from paper procedure to a decision built on data.

BUSINESS AREAS

Business Areas

Intelligent Medical Apps 01

Building medical systems that meet today's technology and AI requirements, designed for the Saudi medical model and its regulatory requirements rather than translated into it.

Operations & Revenue Cycle 02

Full facility operation and revenue-cycle management from billing and coding to collections and reconciliation — raising efficiency and reducing operating and production cost.

Digital Transformation Bridge 03

Moving the medical facility from its existing procedures to the digital-transformation requirements of the health sector, step by step and without halting operations. This is a core part of our vision.

Devices & Medical Brands 04

Operating in NUPCO-approved medical devices, alongside ownership of several medical brands active in the Eastern Province market.

WHY US

Why Us

Both sides of the table

We have worked payer-side and provider-side — we know how both think

Locally built

For the Saudi facility's reality and regulatory requirements

Integrated areas

Technology, operations and devices under one roof

Sovereignty commitment

Data and infrastructure inside the Kingdom
